

Fiber network to home

Saaren IT Ltd CEO Henri Meriheinä wants fiber network connection to his home. He has ordered do-it-yourself packet, but failed to build it. You have been asked to take care of this case in 45 minutes, because after that time the ISP will come to install the end-device, so the cabling should be already by then.

Your job is to terminate the fiber, measure their functionality and make a documentation of the work. You must also make needed RJ45-connection, measure their functionality and to create documentation.

You only have the tools and supplies available in the working zone and possibly your own tools (if you brought any)

The light wavelength used in the power metering process is 1310nm
